

ECON 5253-Spring 2021

Problem Set 5

Kasra Khademozezaian

March 8, 2021

I put both parts in a single file: `PS5_Khademozezaian.py`. You can select the question by the first argument like:

```
python PS5_Khademozezaian.py 3 "link" "output" "max" "tol"  
python PS5_Khademozezaian.py 4 "output"
```

- I scrapped Glassdoor job postings. I looked for the job title, company name and location. I find it interesting to see if the patterns of job posting changes during the lock down. It is useful to know how to scrape js websites but they made this data public last year. I did use [towardsdatascience](#).
- I got daily twitter trends in Oklahoma. I used tweepy to handle twitter API. There is nothing specific to it but I usually run it daily since it gives more entry than my homepage.
